

EuroTable

Version 2

Posted September 24th, 2001

These pages complete the main documentation available in the kit or at the web site.

In less than 100 days, the Euro will be currently used in EuroZone Countries including coins and bank notes.

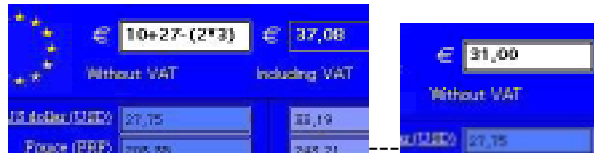

New features

In each field, it is now possible to use **standard algebraic notation**. You can use the arithmetic operators +, -, *, and / for addition, subtraction, multiplication, and division. Parentheses (and) change the order of operations. As in previous versions, all the other lines (other currencies with and without taxes are instantly changed).

If EuroTable is not able to interpret the line, the other fields display “?”.

If you want to see the result of the current edited line, type “=”, and the expression including algebraic notation is replaced by the value.

Icon with rules of calculation :

In EuroTable, the Euro is the swivel currency. To see how calculation works, an icon can be visible at the right of the Euro value with VAT. In preferences mode, click on the space with alt key pressed and the icon will (or not) be present. In normal mode, you can see a tiny chart indication ways of calculation changing according the currency (Euro or not).

Installation:

If you want to use the preferences of the previous version (1.6), only place the application in your previous folder. You will recover all your datas and conversion rates.

Update and fix :

As from 1 January 2001, the currency of Greece will be in euro and the fixed conversion rate between the Euro and the Greek drachma (iso = GRD) of 1 Euro = 340.750 Greek drachma will apply. The greek drachma is know by default in the EuroZone Currencies database.

Some minor user-interface bugs have been fixed.

EuroTable is now built with RealBasic 3.5.1 for MacClassic, Mac OSX and 10.1, Win 32 PC

Sponsored version :

It is possible to insert a logo, wishes, images (size 80 by 382) at the top of EuroTable window. A good way to communicate with yours partners and customers !

Send an e-mail to info@nelixa.com to receive a commercial offer.

Registerware : The today version of EuroTable is free. Only register as described in page 3 of main doc.

Thanks

Thanks to those who have helped me improve this product with suggestions, information or bug reports. (J.Claude J. Marc P. Frédéric B. Nicolas M. Bruno C....)

Legal Statements

The software and accompanying instructions are provided 'as is' without warranty of any kind. Authors do not warrant, guarantee, or make any representations regarding the use or, or the results of the use of the software or accompanying instructions in terms of correctness, accuracy, reliability, currentness, or otherwise. The entire risk as to the results and performance of the software is assumed by you. If the software or instructions are defective, you, and not The author, assume the entire cost of all necessary servicing, repair or correction.

Due to the possible influence of "rounding off" according to the number of decimal points, each user should make the verifications and adjustments that he or she deems necessary. The initial exchange rates are only indicative for non Euro-Zone currencies.
